

Lesson 10-2b

$\Delta < 0$

Ellipses: Eccentricity

$\Delta = 0$

Objective

Students will...

- Be able to know and set up the ratio of eccentricity for any given ellipse.
- Be able to derive equation of an ellipse given the eccentricity and the foci.

Ellipse

Here, we want to geometrically define what an ellipse is.

Geometric Definition of an Ellipse- An ellipse is the set of all points in the plane the sum whose distances from two fixed points F_1 and F_2 is a constant. These two fixed points are **foci** (plural of focus) of the ellipse.

Ex.

Eccentricity

We know that an ellipse is an oval shape, which can be considered as a **stretched circle**. A numerical value that indicates how close an ellipse is to a circular shape is known as the **eccentricity** of a circle.

Eccentricity- Given a standard ellipse with the equation $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ or $\frac{x^2}{b^2} + \frac{y^2}{a^2} = 1$, the eccentricity e is the number $e = \frac{c}{a}$, where $c^2 = a^2 - b^2$ and for every ellipse, $0 < e < 1$.

Eccentricity of an Ellipse

With that being said, eccentricity is useful in telling us just how close an ellipse looks like a circle. If e is closer to 0, then the ellipse looks more like a circle. If e is closer to 1, then the ellipse looks more like an oval.

$$e = 0.1$$

$$e = 0.5$$

$$e = 0.68$$

$$e = 0.86$$

Example

Find the eccentricity of the following ellipse.

$$1 = \frac{x^2}{25} + \frac{y^2}{9} = 1$$

$$a = 5$$

$$e = \frac{4}{5} = 0.8$$

$$c^2 = a^2 - b^2$$
$$= 25 - 9$$

$$= 16$$

$$c = \pm 4$$

Example

Find the eccentricity of the following ellipse.

$$y = \frac{x^2}{16} + \frac{y^2}{25} = 1$$

$$a^2 \quad a=5$$

$$c = \pm 3 .$$

$$e = \frac{3}{5} = 0.6 .$$

Example

Find the equation of the ellipse with foci $(0, \pm 8)$ and eccentricity $e = \frac{4}{5}$.

$$\frac{x^2}{b^2} + \frac{y^2}{a^2} = 1$$

$$e = \frac{c}{a} = \frac{8}{10} = \frac{4}{5}$$

$$c^2 = a^2 - b^2$$

$$64 = 100 - b^2$$

$$b^2 = 36$$

$$\Rightarrow \frac{x^2}{36} + \frac{y^2}{100} = 1$$

Example

Find the equation of the ellipse with foci $(0, \pm 20)$ and eccentricity $e = \frac{4}{5}$.

$$400 = 625 - b^2$$
$$225 = b^2$$

$$\frac{x^2}{225} + \frac{y^2}{625} = 1$$

$$= \frac{20c}{25a}$$

Homework 5/21

TB pg. 759-760 #9-15 (^{odd}~~e.o.o~~) (just find the eccentricity!), 38-40

$$\frac{2x^2}{3} + \frac{y^2}{3} = \frac{3}{3} \quad |$$

$$= \frac{x^2}{3/2} + \frac{y^2}{3} = 1$$
